Profile

Senior Frontend Developer with 10+ years of experience building scalable, high performance web applications across healthcare, analytics, and enterprise platforms.

Expert in **React**, **TypeScript**, and modern **JavaScript** with strong experience in **Vue.js** and **Angular**. Skilled in designing reusable component architectures, optimizing frontend performance, and delivering accessible, responsive user interfaces.

Experienced in Agile environments collaborating with product owners, designers, and backend engineers to deliver business critical applications.

Achievements

- **Migrated legacy editorial platform to React and TypeScript** at the Royal Pharmaceutical Society. **Improved** maintainability, scalability, and long term sustainability of the platform.
- **Reduced manual editorial workflows by approximately 70%** through UI workflow optimisation and system modernisation.
- **Improved analytics platform performance by 40% at SplashBI** by implementing code splitting, lazy loading, and API optimisation.
- Received a **Performance Award at SplashBI** for contributing to significant frontend performance improvements.
- **Led frontend development** for enterprise reporting dashboards used for data driven decision making across multiple business units.
- **Designed reusable UI component libraries** to maintain consistent design systems across multiple applications.
- **Mentored junior developers** and contributed to maintaining high engineering standards through code reviews and knowledge sharing.

Core Competencies

Frontend Technologies

React, TypeScript, JavaScript (ES6+), Vue.js, Angular 11

UI & Styling

HTML5, CSS3, SASS, LESS, Bootstrap, Material UI (MUI), Storybook

UI/UX Design

Figma, Wireframing

Testing

Jest, Cypress, Vitest, React Testing Library, Unit Testing, Integration Testing, End-to-End Testing

Performance & Optimisation

Code Splitting, Lazy Loading, Memoization, Performance Profiling, Web Accessibility, Cross-Browser Compatibility

Tools & Build Systems

Webpack, Vite, Babel, NPM

Version Control

Git, GitHub, GitLab, SVN

APIs & Data

REST APIs, Firebase, MongoDB, SQL, Oracle DB

Cloud & DevOps

AWS, CI/CD, Jenkins, GitHub Actions

Methodologies

Agile, Scrum, Kanban

Professional Experience

Rolisma Ltd - Contract

09/2025 – 03/2026

Frontend Developer

London, United Kingdom

Contracted via Rolisma Ltd to the Royal Pharmaceutical Society, contributing as a Frontend Developer on the JANUS platform modernisation project. Continued delivering React/TypeScript solutions, maintaining consistency with existing architecture and workflows.

Royal Pharmaceutical Society - Permanent

10/2022 – 08/2025

Front End Developer

London, United Kingdom

Project: JANUS – Editorial Platform Modernisation

Description: JANUS is a large scale modernisation initiative aimed at transforming legacy editorial systems into a modern, scalable, and high-performance platform.

Key Contributions

- Developed and migrated application using **React.js, JavaScript (ES6+) and TypeScript**, ensuring **scalable and maintainable frontend architecture**.
- Built **component-driven UIs** and reusable component libraries, improving **consistency and development efficiency** across applications.
- Developed and maintained UI components in **Storybook**, enabling **isolated development, component documentation, and visual validation**, improving collaboration between developers and designers.
- Created **reusable and testable UI components** aligned with design system standards, reducing duplication and improving maintainability.

- Integrated frontend applications with **Python-based REST APIs**, ensuring efficient **data flow and API communication**.
- Applied strong knowledge of **HTML5, CSS3, responsive design, and theming**, delivering accessible and user-friendly interfaces.
- Used **Material UI (MUI)** to build scalable and consistent UI components.
- Translated **Figma designs into pixel-perfect, responsive UI components**.
- Refactored complex editorial workflows, reducing manual effort by **~70%** and improving efficiency.
- Optimized performance using **efficient rendering techniques and improved state management**.
- Collaborated within **Agile/Scrum teams**, working closely with product owners, designers, and backend engineers.

Impact : Improved editorial productivity and enabled **faster and more reliable product releases** across the Medices platform.

Project: Drug Compatibility Checker

Description : A clinical decision support application designed to help pharmacists and healthcare professionals **identify and validate drug interactions in real time**.

Key Contributions

- Developed a **responsive and intuitive user interface using Vue.js**, tailored for healthcare professionals.
- Integrated **RESTful APIs** to dynamically retrieve and validate drug interaction data.
- Implemented **unit and integration tests** to ensure data accuracy and application reliability.
- Delivered **accessible user interfaces** aligned with healthcare accessibility standards.
- Ensured **cross-browser compatibility and performance optimisation** for critical clinical environments.

Impact : Enhanced **patient safety** by enabling healthcare professionals to access reliable, real-time drug interaction validation.

Splash Business intelligence Pvt Ltd **Senior Software Engineer**

10/2016 – 09/2022 | Hyderabad, India

Project: SplashBI – Analytics Platform

Description: SplashBI is an enterprise grade Business Intelligence platform that enables users to generate adhoc reports and interactive dashboards across multiple data sources.

Key Contributions

- Led front-end development of dynamic dashboards and reporting modules using **Angular, TypeScript, HTML, and CSS**, delivering intuitive and high-quality user interfaces.
- Built interactive data visualisations and configurable reporting interfaces using **Telerik Kendo UI**, enhancing user experience and supporting complex user journeys.
- Improved application performance by **40%**, optimising load times and ensuring a smooth, responsive user experience.
- Developed **reusable, scalable UI components** to ensure consistency, maintainability, and alignment with front-end design standards across the platform.
- Implemented **responsive design principles**, ensuring seamless functionality across desktop and tablet devices, with strong cross-browser compatibility.
- Collaborated closely with backend engineers to integrate **RESTful APIs**, ensuring efficient data flow and seamless end-to-end functionality.
- Worked with **Product Owners, Business Analysts, and UX designers** to translate business requirements into user-friendly solutions.

- Participated in **Agile/Scrum delivery**, including sprint planning, estimation, stand-ups, and iterative enhancements.
- Contributed to **UI testing, defect resolution, and user acceptance testing (UAT)** to ensure high-quality releases.
- Mentored junior developers and conducted **code reviews**, promoting clean, maintainable code and continuous improvement of development practices.
- Applied best practices in **usability, accessibility (WCAG), and performance optimisation** across front-end components.
- Recognised with a **Performance Sprint Award** for delivering significant front-end performance improvements.

Impact: Enabled enterprise clients to **generate real time analytics and interactive charts and dashboards**.

Napier Healthcare Software Engineer

11/2015 – 10/2016 | Hyderabad, India

Project: **SATA** – Healthcare Automation System

Description: SATA is a comprehensive healthcare automation platform designed to streamline hospital and clinical workflows by digitising operational processes across multiple departments.

Key Contributions

- Developed **modular and scalable UI components** for hospital management workflows using **JavaScript and Ext JS**.
- Built **role based portals** for doctors, nurses, and administrators to support different operational responsibilities.
- Automated key operational processes including **patient admissions, laboratory management, inventory tracking, and patient record management**.
- Integrated **RESTful APIs** to enable real-time access to clinical and operational data.
- Collaborated closely with **QA teams** to ensure stable, high quality, and defect-free production releases.

Impact: Improved **operational efficiency** and enabled hospitals to **digitise complex clinical workflows**, enhancing overall process management across multiple departments.

Glasscheese Pvt Ltd Junior Front End Developer

02/2014 – 11/2015 | Chennai, India

Project: **Sebit** – Educational Platform

Description: Sebit is a gamified learning platform designed to improve mathematics engagement for primary school students through interactive and game based learning experiences.

Key Contributions

- Developed **interactive, game based learning modules** using **JavaScript and jQuery** to enhance student engagement.
- Built **responsive user interfaces** using **Bootstrap, HTML5, and CSS3** to ensure compatibility across different devices and screen sizes.
- Implemented frontend modules within an **MVC (.NET) architecture**, integrated with **SQL Server** for data management.
- Collaborated closely with **UI designers and backend developers** to deliver a seamless user experience and optimise application performance.

Impact: Improved **student engagement and learning participation** through interactive and gamified educational experiences.

Education

University of East London

**Master of Science: Computing and information
communication technology**

10/2021 – 09/2022

London, United Kingdom
